STATUS

Prepared for GitHub push

This report summarizes the major gameplay, visual, roster, mobile, leaderboard, performance, and quality-of-life updates made to Duck Duck Nuke, including the latest local patch being published.

Latest Patch: Scoring And Mobile Frame Fix

- Changed scoring to total score = distance points + cap points.
- Distance now awards 1 point per 100 distance units; caps remain worth +2 each.
- Barrel passes now drive pacing/difficulty instead of directly adding score.
- Easy Mode hides the cap milestone readout because boost energy is unlimited.
- Caps now show a short +2 CAPS floating pickup animation.
- Mobile portrait menus, character select, Game Over, and leaderboard now use a safe visible content area.
- Easy Mode mobile camera keeps gameplay framed inside the HUD and bottom controls.
- Mobile layout detection now uses viewport size instead of pointer/touch detection alone.

Game Modes

- Added Easy Mode with a fixed 960x640 logical world, consistent physics, and unlimited Core Charge.
- Kept Hard Mode as the full-screen physics mode using the player's real browser size.
- Added mode select flow after the intro screen and a Change Mode option from character select.
- Adjusted Easy Mode mobile zoom so gameplay feels closer while preserving Easy Mode physics.

Mobile And Desktop Quality Of Life

- Moved Duck Duck Nuke to a full-screen layout on desktop and mobile.
- Mobile landscape shows Rotate Device / Play In Portrait instead of trying to play sideways.
- Added a desktop Home button that returns to character select during play.
- Cleaned up mobile right-side controls so Home stays available while Start/Pause are handled by bottom controls.
- Improved mobile character select controls, roster tabs, scoreboard buttons, and page navigation.

Roster Updates

- Added roster tabs: Nuke Crew and Rocket Squad.
- Added Sharkbite 07 to Rocket Squad.
- Added BIGndn1988, Coconut, YouYosong, Rocco, PettyWiselol, WyldWolf, Coffee, MM777, Mayra Del Yermo, Amy the Nuka Nightmare, Ducky, Big ZX, The Painter, and other roster entries across updates.
- Replaced The Painter art and cleaned internal white/checkerboard artifacts.
- Cleaned Coconut sprite artifacts and normalized newer character select preview placement.

Visuals And Assets

- Added a Duck Duck Nuke intro poster with click/tap to start.
- Expanded Wulfzx Underground background rotation and switched scenes randomly without immediate repeats.
- Replaced simple caps with WZX cap art.
- Added the custom Core Charge bar art.
- Replaced drawn obstacle barrels with WZX radiation/TNT barrel sprites and tightened stacking on mobile.

Leaderboard And Data

- Added Firebase daily Top 5 leaderboard support with public score submission.
- Added a live UTC reset countdown timer on leaderboard views.
- Added select-screen scoreboard viewer.
- Improved duplicate-name behavior so a player name updates rather than creating repeated entries when applicable.
- Preserved saved local best score and initials keys for continuity.

Performance And Stability

- Added cached background layer rendering to reduce lag during scene changes.
- Added cached gameplay character sprites for smoother drawing.
- Kept background transitions smooth and randomized while avoiding immediate repeats.
- Ran JavaScript parse checks and viewport smoke checks for desktop, mobile portrait, and mobile landscape.

Current publishing note: this PDF was generated with the latest local build that includes distance-plus-cap scoring, Easy Mode cap HUD cleanup, mobile safe-area framing, and Game Over/leaderboard fit improvements.
